Foreword **v**

1. Introduction **1**

The concept of risk 1

Principles of total risk prediction 2

Methods of total risk prediction 4

Definition of 'high' risk 7

2. Who and what to test **8**

Screening 8

How to assess total CV risk in primary care? 8

What issues should the cover during the 10-minute consultation? 8

Is the patient at high absolute risk of CVD? 36

3. How to manage the patient at risk of CVD **41**

Who to treat? 41

How to treat? 42

General lifestyle advice 42

Serum lipids and dyslipidaemia 44

BP and hypertension 50

Other prophylactic drug therapy 57

Multiple risk factors: the metabolic syndrome 58

Co-morbidity: diabetes mellitus 58

4. Person-centred care **64**

How to identify the patient's beliefs about CV problems (their concerns and expectations)? 64

What are the patient's cultural beliefs? 65
How to recognise nonconcordance with primary prevention? 65
Are any treatments particularly appropriate? 67

5. Applying the evidence 69
What are the implications of the international best-practice recommendations for GPs? 69
Selected landmark studies 69
GP prescribing options for tackling CV risk factors in primary care: a summary 75
When to refer? 76

6. Review and recall of the patient at risk of CVD 79
What ongoing patient care, monitoring and follow-up are necessary? 79
What roles do other key healthcare workers have in managing the patient? 80
What is the role of information technology (IT)? 82
What is the role of the expert patient? 82
